

THE IMPORTANCE OF INTERNATIONAL STUDENTS TO AMERICA

BY STUART ANDERSON

EXECUTIVE SUMMARY

International students provide a key source of talent for U.S. employers and are crucial to enhancing the ability of U.S. universities to conduct research and offer high quality academic programs to U.S. students. International students also provide cultural and foreign policy benefits to the United States and are an important and inexpensive way to promote American ideas and values abroad.

Table 1  
Full-time Graduate Students and the Percent of International Students by Field (2010)

Field	Percent of International Students	Number of Full-time Graduate Students – International Students	Number of Full-time Graduate Students – U.S. Students
Electrical Engineering	70.3%	21,073	8,904
Computer Science	63.2%	20,710	12,072
Industrial Engineering	60.4%	5,057	3,314
Economics	55.4%	7,587	6,117
Chemical Engineering	53.4%	4,012	3,504
Materials Engineering	52.1%	2,660	2,891
Mechanical Engineering	50.2%	8,352	8,273
Mathematics & Statistics	44.5%	7,840	9,766
Physics	43.7%	5,716	7,369
Civil Engineering	43.7%	6,202	7,989
Other Engineering	42.1%	7,279	9,992
Chemistry	40.3%	8,059	11,952

Source: National Science Foundation, Survey of Graduate Students and Postdoctorate, [webcaspar.nsf.gov](http://webcaspar.nsf.gov). U.S. students include lawful permanent residents.

Among the findings in this report:

- International students account for 70 percent of the full-time graduate students (master’s and Ph.D.s) in electrical engineering, 63 percent in computer science, 60 percent in industrial engineering, and more than 50 percent in economics, chemical engineering, materials engineering and mechanical engineering. These students represent a vital source of talented professionals, researchers and innovators for U.S. employers.
- In electrical engineering, at 145 U.S. universities, representing nearly 90 percent of the U.S. graduate school programs with at least 30 students, the majority of full-time graduate students are international students.

---

*The Importance of International Students to America*

- In computer science, at 152 universities, representing 76 percent of the U.S. graduate school programs with at least 30 students, the majority of full-time graduate students are international students.
- Foreign graduate students are crucial in assisting in research that attracts top faculty and strengthens the academic programs at U.S. schools, which benefits U.S. students and ensures America retains its preeminence as a teaching center in science, technology, engineering and math (STEM) fields.
- By assisting in important research foreign graduate students foster innovation at U.S. universities that benefits U.S. society and the American economy. In 2010, U.S. universities conducted 51 percent of all basic research performed in the United States, according to the National Science Foundation.
- International students often become contributors to the U.S. economy as professors, researchers and entrepreneurs. Nearly 40 percent of immigrant entrepreneurs in recent venture-funded companies first entered the country as international students, according to a survey conducted by the National Venture Capital Association.
- Legislation pending in Congress would allow foreign graduate students in science, technology, engineering and mathematics (STEM) fields to be sponsored without being subject to the current green card quota (S. 744) or, at minimum, to wait less than they would today (H.R. 2131).

A grant from the Ewing Marion Kauffman Foundation funded the research for this paper. The contents are solely the responsibility of the National Foundation for American Policy.

## **INTERNATIONAL STUDENTS A MAJORITY IN MANY U.S. GRADUATE SCHOOL PROGRAMS**

Examining the number of schools where international students account for a majority of the full-time graduate students (master's and Ph.D.s) in a program helps illustrate the importance of international students. In electrical engineering, at 145 U.S. universities, representing nearly 90 percent of the U.S. graduate school programs with at least 30 students, the majority of full-time graduate students are international students. In computer science, at 152 universities, representing 76 percent of the U.S. graduate school programs with at least 30 students, the majority of full-time graduate students are international students.<sup>1</sup>

**Table 2**  
**U.S. University Graduate Programs with a Majority of International Students**

<b>Field</b>	<b>Number of U.S. Universities with More Than 50 Percent International Students in Graduate School Program (2010)</b>	<b>Percentage of U.S. Universities with a Majority of International Students in Graduate School Program (2010)</b>
<b>Electrical Engineering</b>	145	87 percent
<b>Computer Science</b>	152	76 percent

U.S. students include lawful permanent residents; National Foundation for American Policy analysis. Note: analysis limited to programs with at least 30 full-time students.

## **INTERNATIONAL STUDENTS: A KEY SOURCE OF TALENT AND INNOVATION**

International students represent a key source of talent for U.S. employers. What do U.S. employers find when they recruit on college campuses in key technology fields? At most schools, U.S. companies find a high percentage of the graduate students in science and engineering are international students. As Tables 1 illustrates, foreign nationals account for 70 percent of the full-time graduate students in electrical engineering, 63 percent in computer science, 60 percent in industrial engineering, and more than 50 percent in economics, chemical engineering, materials engineering and mechanical engineering in 2010.<sup>2</sup> (See Appendix for individual universities.) In comparison, in 1982, foreign nationals accounted for 44 percent of the full-time graduates students in electrical engineering and 35 percent in computer science.<sup>3</sup>

<sup>1</sup>National Science Foundation, Survey of Graduate Students and Postdoctorate, [webcaspar.nsf.gov](http://webcaspar.nsf.gov). *The Importance of International Students to America*

Would it aid the U.S. economy or the competitiveness of individual businesses if U.S. companies ignored or were prevented from hiring more than half or even two-thirds of today's talented graduates in science and technology fields from American universities? Does anyone believe the global competitors of U.S. companies would refuse to hire these students?

Openness to international students and U.S. employment-based immigration policies are closely connected. Legislation pending in Congress would allow foreign graduate students in science, technology, engineering and mathematics (STEM) fields to be sponsored without being subject to the current green card quota (S. 744) or at least to be given priority and wait less time than they would today (H.R. 2131). Such a policy change would be important, since the wait time for green cards can be many years for skilled immigrants, particularly for Indian and Chinese immigrants, sending a signal that America may not be the best place to build a career.<sup>4</sup>

Economists support ways to retain talented international students in the United States, including providing a clear path for permanent residence for graduates of U.S. universities in science and engineering fields. University of California, Davis economist Giovanni Peri, writes, "The United States has the enormous international advantage of being able to attract talent in science, technology, and engineering from all over the world to its most prestigious institutions . . . The country is certainly better off by having the whole world as a potential supplier of highly talented individuals rather than only the native-born."<sup>5</sup>

Peri describes why his research shows a gain from immigration to native-born Americans with a college degree:

The relatively large positive effect of immigrants on the wages of native-born workers with a college degree or more is driven by the fact that creative, innovative, and complex professions benefit particularly from the complementarities brought by foreign-born scientists, engineers, and other highly skilled workers. A team of engineers may have greater productivity than an engineer working in isolation, implying that a foreign-born engineer may increase the productivity of native-born team members . . . Technological and scientific innovation is the acknowledged engine of U.S. economic growth and human talent is the main input in generating this growth.<sup>6</sup>

---

<sup>4</sup> The per country limit affects immigrants from countries with large populations the most, resulting in longer wait times for employment-based green cards.

<sup>5</sup> Giovanni Peri, *Immigrants, Skills, and Wages: Measuring the Economic Gains from Immigration*, (Washington, DC: Immigration Policy Center, March 2006), p. 7.

<sup>6</sup> *Ibid.*, p. 6.

*The Importance of International Students to America*

Foreign graduate students, particularly those who study science or engineering, are a boon to the U.S. economy and education system. “Foreign students, skilled immigrants, and doctorates in science and engineering play a major role in driving scientific innovation in the United States,” according to a study by Keith Maskus, an economist at the University of Colorado, Aaditya Mattoo, lead economist at the World Bank’s Development Economics Group, and Gnanaraj Chellaraj, a consultant to the World Bank.<sup>7</sup>

Maskus, Mattoo, and Chellaraj found that for every 100 international students who receive science or engineering Ph.D.’s from American universities, the nation gains 63 future patent applications.<sup>8</sup> The researchers concluded, “Larger enrollments of international graduate students as a proportion of total graduate students result in a significant increase in patents awarded to both university and non-university institutions as well as increases in total patent applications. This finding points out the importance of scientific contributions made by international graduate students in both settings.”<sup>9</sup> Their bottom line conclusion: “[R]educing foreign students by tighter enforcement of visa restraints could reduce innovative activity significantly” in the United States.<sup>10</sup>

In addition to increasing the supply of skilled labor and becoming innovators for U.S. companies, international students also become entrepreneurs. In a survey conducted by the National Venture Capital Association, 38 percent of immigrant entrepreneurs at venture-funded companies said they first entered the United States as international students.<sup>11</sup> For example, Alex Mehr and Shayan Zadeh, co-founders of the online romantic social network Zoosk, came to America as graduate students at the University of Maryland. Another surprising contribution of international students to America may be their children. Fourteen of the 40 finalists (35 percent) at the 2011 Intel Science Talent Search competition, the leading science contest for high school seniors, had a parent who originally arrived in America as an international student.<sup>12</sup>

## **INTERNATIONAL STUDENTS ARE CRUCIAL TO SUPPORTING RESEARCH AT U.S. UNIVERSITIES**

International students are key to supporting research at U.S. universities, which helps retain and attract top faculty. Tables 3 through 8 illustrate that at schools such as Rice University, Indiana University, Purdue University, Ohio State and others, international students generally comprise 60 to 80 percent of the graduate students in electrical engineering, computer science, chemical engineering and other fields. In 2010, U.S. universities conducted 51 percent of all basic research performed in the United States, according to the National Science Foundation.<sup>13</sup>

“We are a research university, and in computer science that means that much of the research is done by teams led by professors with experiments carried out by graduate students,” explains Professor Christopher Raphael, chair of the computer science department at Indiana University. “This model only works if we can get high-quality Ph.D. students and we would be hard pressed to get the number we need solely from the United States.”<sup>14</sup>

The high level of international students plays a role in universities being able to attract and retain faculty, which benefits U.S. students. “If we were not to place such a heavy emphasis on research, we wouldn’t be able to get faculty that teach the wide range of things we do, with the appropriate expertise, so our educational mission would suffer,” said Professor Raphael. “Really the most important part of the educational experience is to work closely with high quality faculty, as one does directly at the Ph.D. stage. So the research and the education are of a piece.”<sup>15</sup>

Professor Stuart Cooper, department chair of chemical and biomolecular engineering at Ohio State University, also points to the connection between research and teaching at U.S. colleges. “There is a synergy. To get tenure and perform research, professors require a significant number of graduate students and there are not enough domestic students alone in certain fields,” said Professor Cooper. “The advances made by professors and graduate students, including international students and post-docs, provide new knowledge and benefits society.”<sup>16</sup>

Without the ability to perform high-level research at U.S. universities, many talented individuals would not take or seek faculty positions, leaving U.S. schools far weaker and unable to educate U.S. students in important fields.

<sup>16</sup> Interview with Stuart Cooper.

*The Importance of International Students to America*

Graduate students also directly support the educational mission for undergraduates by serving as teaching assistants. Their duties include conducting study sessions and grading, which “takes some of the burden off the faculty” to focus on teaching, according to Professor Cooper.<sup>17</sup>

## **INTERNATIONAL STUDENTS HELP MAINTAIN HIGH-LEVEL GRADUATE PROGRAMS AT MANY U.S. UNIVERSITIES**

Many excellent U.S. universities rely on international students to maintain their graduate school programs at a high level. At Rice University, in 2010, 58 of the 100 full-time graduate students in electrical engineering were foreign nationals. In computer science, 38 of the 63 graduate students (60 percent) were foreign nationals. International graduate students accounted for 72 percent of the full-time students (48 of 67) in chemical engineering and 58 percent (60 of 104) in chemistry.<sup>18</sup>

**Table 3**  
**Rice University**

<b>Field</b>	<b>Percent of International Students</b>	<b>Number of Full-time Graduate Students – International Students</b>	<b>Number of Full-time Graduate Students – U.S. Students</b>
<b>Computer Science</b>	60%	38	25
<b>Electrical Engineering</b>	58%	58	42
<b>Chemical Engineering</b>	72%	48	19
<b>Chemistry</b>	58%	60	44

Source: National Science Foundation, Survey of Graduate Students and Postdoctorate, [webcaspar.nsf.gov](http://webcaspar.nsf.gov). U.S. students include lawful permanent residents.

At Indiana University, 297 of the 438 full-time graduate students (68 percent) in computer science were foreign nationals in 2010. In electrical engineering, 66 out of the 96 graduate students (69 percent) were international students. In economics: 66 percent international students in the graduate program (55 of 83). In physics: 50 percent international students (61 of 122). In math/statistics: 85 out of 158 (54 percent) were foreign nationals.<sup>19</sup>

*The Importance of International Students to America*

At Ohio State, in 2010, 79 percent of the full-time graduate students (266 of 336) in computer science were foreign nationals. In chemical engineering, international graduate students filled 67 percent of the full-time slots (57 of 85).<sup>21</sup>

**Table 6**

The electrical engineering program at the University of Iowa appears to be almost completely reliant on foreign nationals. International graduate students filled 34 of the 40 full-time slots in 2010.<sup>22</sup>

At Texas A&M, 74 percent of the full-time graduate students in computer science (183 of 248) and 82 percent of the graduate students in electrical engineering (408 of 500) were foreign nationals in 2010.<sup>23</sup>

## **DO INTERNATIONAL STUDENTS CROWD OUT U.S. STUDENTS?**

One question raised by openness towards international students is whether such students “crowd out” Americans who wish to attend college. “The first priority is U.S. citizens, we get as many who qualify as we can,” said Ohio State Professor Stuart Cooper. “I don’t think there is crowding out. There is a lot of pressure to have more U.S. citizens. We try for that. The reality is there are not enough to go around.”<sup>25</sup>

Economists Maskus, Mattoo, and Chellaraj dispute a contention by Harvard economist George Borjas that suggests U.S. domestic and foreign graduate students are highly substitutable. Pointing to research by Richard Freeman, Maskus, Mattoo, and Chellaraj note that data over the last three decades show: “The number of Ph.D.s granted to undergraduates of U.S. institutions, most of whom were U.S. citizens, did not change much during this period, while there was a substantial growth in the number of foreign bachelor’s graduates obtaining U.S. doctorates. Thus the change in proportion is mostly due to the expansion of Ph.D. programs, with a majority of the new slots being taken for foreign students rather than through substitution.”<sup>26</sup>

Looking at U.S. graduate programs for the years 1982 through 1995, Mark Regets of the National Science Foundation found no evidence that international students displaced U.S. citizens in graduate programs. The data showed increases in international students in a graduate department were associated with increases, not

<sup>24</sup> Ibid.

<sup>25</sup> Interview with Stuart Cooper.

<sup>26</sup> Maskus, Mattoo, and Chellaraj, p. 8.

### *The Importance of International Students to America*

decreases, in the enrollment of U.S. citizens and permanent residents (approximately one additional U.S. student for every three added international students). Rising enrollment for one group associated with enrollment increases for all groups is “a result inconsistent with displacement,” according to Regets.<sup>27</sup>

A study by the Association of American Universities and the Association of Graduate Schools concluded, “[The] acceptance and enrollment rates of minority applicants are significantly higher in comparison to those of non-U.S. citizen applicants . . . [T]his finding does suggest that institutions do show a preference for admitting U.S. minority applicants rather than non-U.S. citizen applicants.”<sup>28</sup>

## CONCLUSION

International students benefit U.S. universities, U.S. students and the nation in at least four important ways. First, international students expose American students to new ideas and cultures. Without ever leaving campus, U.S. students can make lasting friendships, interactions and connections that will shape and expand their view of the world.

Second, admitting international students benefits U.S. foreign policy. The list of prominent foreign leaders and officials who studied in America during their youth is long and includes today many people rising to important positions in government in China, the Middle East and elsewhere.

Third, attending U.S. universities exposes international students to new ideas and models, which can exert a profound impact on their home countries, such as the move away from socialism to the free market in India. Palaniappan Chidambaram, a former Indian finance minister who was a socialist before attending Harvard Business School, said, “First, the phenomenal success achieved by Indians abroad by practicing free enterprise meant that if Indians were allowed to function in an open market, they could replicate some of that success here [in India]. Secondly, by 1991, sons and daughters of political leaders and senior civil servants were all going abroad and studying abroad and living and working abroad. I think they played a great part in influencing the thinking of their parents.”<sup>29</sup>

Fourth, as focused on in this analysis, international students may make it possible for many universities to offer academic programs in technical fields that would be of lower caliber or be unable to attract top-flight faculty without international students. International students are crucial to enhancing the ability of U.S. universities to

*The Importance of International Students to America*

conduct research, recruit and retain teaching talent and offer high quality academic programs to U.S. students. Moreover, international students provide a key source of talented professionals and researchers for U.S. employers. Reforms in Congress that would make it easier for international students to come to America and remain if offered a job will benefit the U.S. economy. A policy of welcoming international students helps America maintain its leadership as a center of learning and innovation.

## ABOUT THE AUTHOR

Stuart Anderson is Executive Director of the National Foundation for American Policy, a non-profit, non-partisan public policy research organization in Arlington, Va. Stuart served as Executive Associate Commissioner for Policy and Planning and Counselor to the Commissioner at the Immigration and Naturalization Service from August 2001 to January 2003. He spent four and a half years on Capitol Hill on the Senate Immigration Subcommittee, first for Senator Spencer Abraham and then as Staff Director of the subcommittee for Senator Sam Brownback. Prior to that, Stuart was Director of Trade and Immigration Studies at the Cato Institute in Washington, D.C., where he produced reports on the military contributions of immigrants and the role of immigrants in high technology. He has an M.A. from Georgetown University and a B.A. in Political Science from Drew University. Stuart has published articles in the *Wall Street Journal*, *New York Times*, *Los Angeles Times*, and other publications. He is the author of the book *Immigration* (Greenwood, 2010).

## ABOUT THE NATIONAL FOUNDATION FOR AMERICAN POLICY

Established in the Fall 2003, the National Foundation for American Policy (NFAP) is a 501(c)(3) non-profit, non-partisan public policy research organization based in Arlington, Virginia focusing on trade, immigration and related issues. The Advisory Board members include Columbia University economist Jagdish Bhagwati, former U.S. Senator and Energy Secretary Spencer Abraham, Ohio University economist Richard Vedder, former INS Commissioner James Ziglar and other prominent individuals. Over the past 24 months, NFAP's research has been written about in the *Wall Street Journal*, the *New York Times*, the *Washington Post*, and other major media outlets. The organization's reports can be found at [www.nfap.com](http://www.nfap.com).
