

U.S. LABOR FORCE ANALYSIS FOR JULY 2025

Given current and projected Trump administration immigration policies, it is likely that a decline in the foreign-born labor force will continue in the second half of 2025 through 2026. The trend is now significant in both statistical and policy terms. The decline may not be evident every month, due to imperfections in the data.

The decline in the foreign-born portion of the labor force is due to policies on deportation and actions that remove previously authorized workers from the lawful workforce, such as ending [humanitarian parole programs](#) and [Temporary Protected Status](#), as well as [policies on legal immigration](#), including the blocking of up to 125,000 new refugee admissions.

Over the past year, the economic data do not support the view that removing foreign-born workers from the labor force will increase U.S.-born labor force participation.

The absence of significant labor force growth will likely negatively affect U.S. economic growth in 2025 and 2026. That does not mean it will cause a recession, but it will result in relatively slower economic growth than if the U.S. labor force experiences significant growth. The inability to produce as many goods and services (i.e., increase supply) could lead to inflationary pressures that may limit the Federal Reserve's ability to act. Fed Chair Jerome Powell noted that the increase in foreign-born workers helped reduce inflationary pressure by increasing the supply of goods and services during the post-Covid-19 economic recovery.

A more detailed look at the data:

- The Bureau of Labor Statistics [household survey](#) shows a decline of 1.2 million foreign-born workers since the start of the administration in January 2025, and a decline of 1.7 million since its peak in March 2025.
 - Due to high standard errors in the monthly survey, the actual decline may be much smaller. However, both declines mentioned above are statistically significant. For the same reason, it is possible that the decline is greater than currently measured.
- A decline of any size in the immigrant labor force is of concern:
 - Immigrants have accounted for over half of American labor force growth in each of the last three decades, and this trend is expected to continue with the aging of the U.S.-born labor force.
 - Census, CBO and SSA all assume increases in the working-age foreign-born population in 2025 and future years, and these assumptions are part of the current forecast of federal debt and of the Social Security Trust Fund.
- The size of the immigrant labor force is affected by new immigration, emigration and immigration policies.
 - Deportations have not yet been large, but arrests and detention also remove workers from the labor force.

U.S. Labor Force Analysis for July 2025

- Removing legal status and work permits from individuals by ending humanitarian parole and Temporary Protected Status programs will cause some people to withdraw from the labor force and others to emigrate.
- There has always been significant emigration of all classes of immigration, including temporary and permanent visa holders. Perception of a less hospitable environment may increase these rates.
- There is no indication that the U.S.-born are being drawn into the labor force as immigrants leave.
 - [Labor force participation](#) for the U.S. born aged 16 and older declined slightly from 62.3% in July 2024 to 62.0% in July 2025.
 - Looking at each age group separately, U.S.-born labor force participation is already at or near all-time highs. The sole exception is for U.S.-born under age 25, but these, too, are at all-time highs if being in-school is included.
 - The [total seasonally adjusted labor force](#) has declined by 402,000 since January 2025 and by 793,000 since its peak in April 2025.

ABOUT THE NATIONAL FOUNDATION FOR AMERICAN POLICY

Established in 2003, the National Foundation for American Policy (NFAP) is a 501(c)(3) non-profit, non-partisan public policy research organization based in Arlington, Virginia, focusing on trade, immigration and related issues. Advisory Board members include Columbia University economist Jagdish Bhagwati, Cornell Law School professor Stephen W. Yale-Loehr, Ohio University economist Richard Vedder and former INS Commissioner James Ziglar. Over the past 24 months, NFAP's research has been written about in the *Wall Street Journal*, the *New York Times*, the *Washington Post*, and other major media outlets. The organization's reports can be found at www.nfap.com.
